***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: Claims 1-6 and 8-22 are allowed over the closest reference, U.S. Patent No. 6,765,074 to Sartain.

The present invention is drawn to a process comprising polymerizing an olefin in the presence of an activator and a supported organometallic complex wherein the supported organometallic complex is prepared by treating a support with about 0.1 to about 0.2 mole of an organozinc compound per kg support and combining the organozinc treated support with an organometallic complex comprising a group 3-10 transition metal, M, and at least one indenoidolyl ligand that is bonded to M.

Sartain claims a process for polymerization of olefins in the presence of an activator and a supported organometallic complex containing a Gp 3-10 metal and at least one indenoidolyl ligand wherein the support is treated with an organoboron, an organoaluminum, or an organozinc compound. The reference does not teach treating a support with about 0.1 to about 0.2 mole of an organozinc compound per kg support, as presently claimed, and use of this amount is not obvious from the teachings in the patent.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
